

# DCV-AD

## Previous generation products

### Key benefits

- High thermal performance
- Saving water
- Top hygiene control

DCV-AD, TrilliumSeries characteristics

Counter flow, adiabatic pre-cooling, axial fan, induced draft

Capacity range

340 - 1030 kW

**Typical applications** 

- Small to medium industrial refrigeration applications
- Locations with limited water and space availability

#### **Boosting high thermal performance**

- Pads in front of the finned coil pre-cool air to virtual wet bulb temperature.
- Up to 40% improved capacity compared to dry cooling.
- DCV-AD condenser consumes less energy.
- DCV-AD condenser achieves low process temperatures.

#### Saving water

• TrilliumSeries condensers **achieve annual water savings exceeding 80%** water compared to normal water cooled condensers by limited adiabatic operation.

#### Top hygiene control

- Featuring a **once-through system**: recirculation and stagnation of water eliminated.
- No stagnant water: pre-cooler water conveyed from pads to sewer via a gutter.
- No aerosol formation: TrilliumSeries condensers minimize the Legionella risk.
- TrilliumSeries condensers cool incoming air without transferring water to the dry coil

Interested in the TrilliumSeries condenser for your refrigeration project? Contact your local <u>BAC</u> representative for more information.
