Centrifugal fans

Spare parts guide

Centrifugal fans

Benefits

BAC centrifugal fans are designed, tested, manufactured and rated by BAC for **optimum performance**. These centrifugal fans are very quiet for minimal surrounding noise.

Standard features

- Protected with the Baltibond hybrid coating. Perfect for use in the moist cooling tower environment, ensuring **maximum service life**.
- Nearly noiseless.
- Shipped with the necessary hub clamps, hardware and adhesive for installation.

Caution tip !

Selecting a fan requires knowledge of the cooling tower system curve (air flow, pressure drop). Changing to a non-original fan can severely deteriorate your cooling tower thermal performance and increase your process energy costs.

Want to replace the centrifugal fans of your BAC cooling equipment? Contact your local BAC representative.
