Clean out port

A factory-installed clean out port

- facilitates your basin cleaning
- helps improve year-round system hygiene

When cleaning the sump, simply open the clean out port and **easily remove all accumulated silt and sludge** when flushing with water. All water and solids drain through the port outside the unit.

Want to benefit from a clean out port on your equipment? Contact your [local BAC representative](https://www.baltimoreaircoil.eu/en/products/PFI-clean-out-port) for more information.
