

## Open cooling towers

## Options and accessories

### Sound attenuation

VTL-E cooling towers use **quiet centrifugal fans**, but to reduce noise even further, you can extend your VTL-E cooling tower with sound attenuators at the air intake and discharge points.

### For residential areas:

#### Sound attenuation ([HS type](#))

- Discharge attenuator with vertical baffles
- Intake attenuator with straight baffles

### For rural areas:

#### Heavy sound attenuation ([HD type](#))

- Discharge attenuator with vertical baffles
- Double intake attenuator with straight baffles

Your [local BAC representative](#) can explain any of the above sound attenuator options in more detail and provide you with [sound pressure and sound power data](#).
